Keyword : Applications, Identify Symptoms By Disease Type

### **Abstract:**

Scientific writing is about an application to identify the type of disease based on symptoms, which the author tries to present how to identify the disease using a computer system. This application is made to meet the needs of patients or people who need them.

In this scientific writing, Application To Identify Disease Symptoms Based created using PHP programming language or PHP Hypertext Preprocessor is a form of language scripts that are placed on the server and processed in the process. The result is sent to the client, where using the browser. In particular, PHP is designed to create dynamic web, meaning that it can form a view based on current demand.
